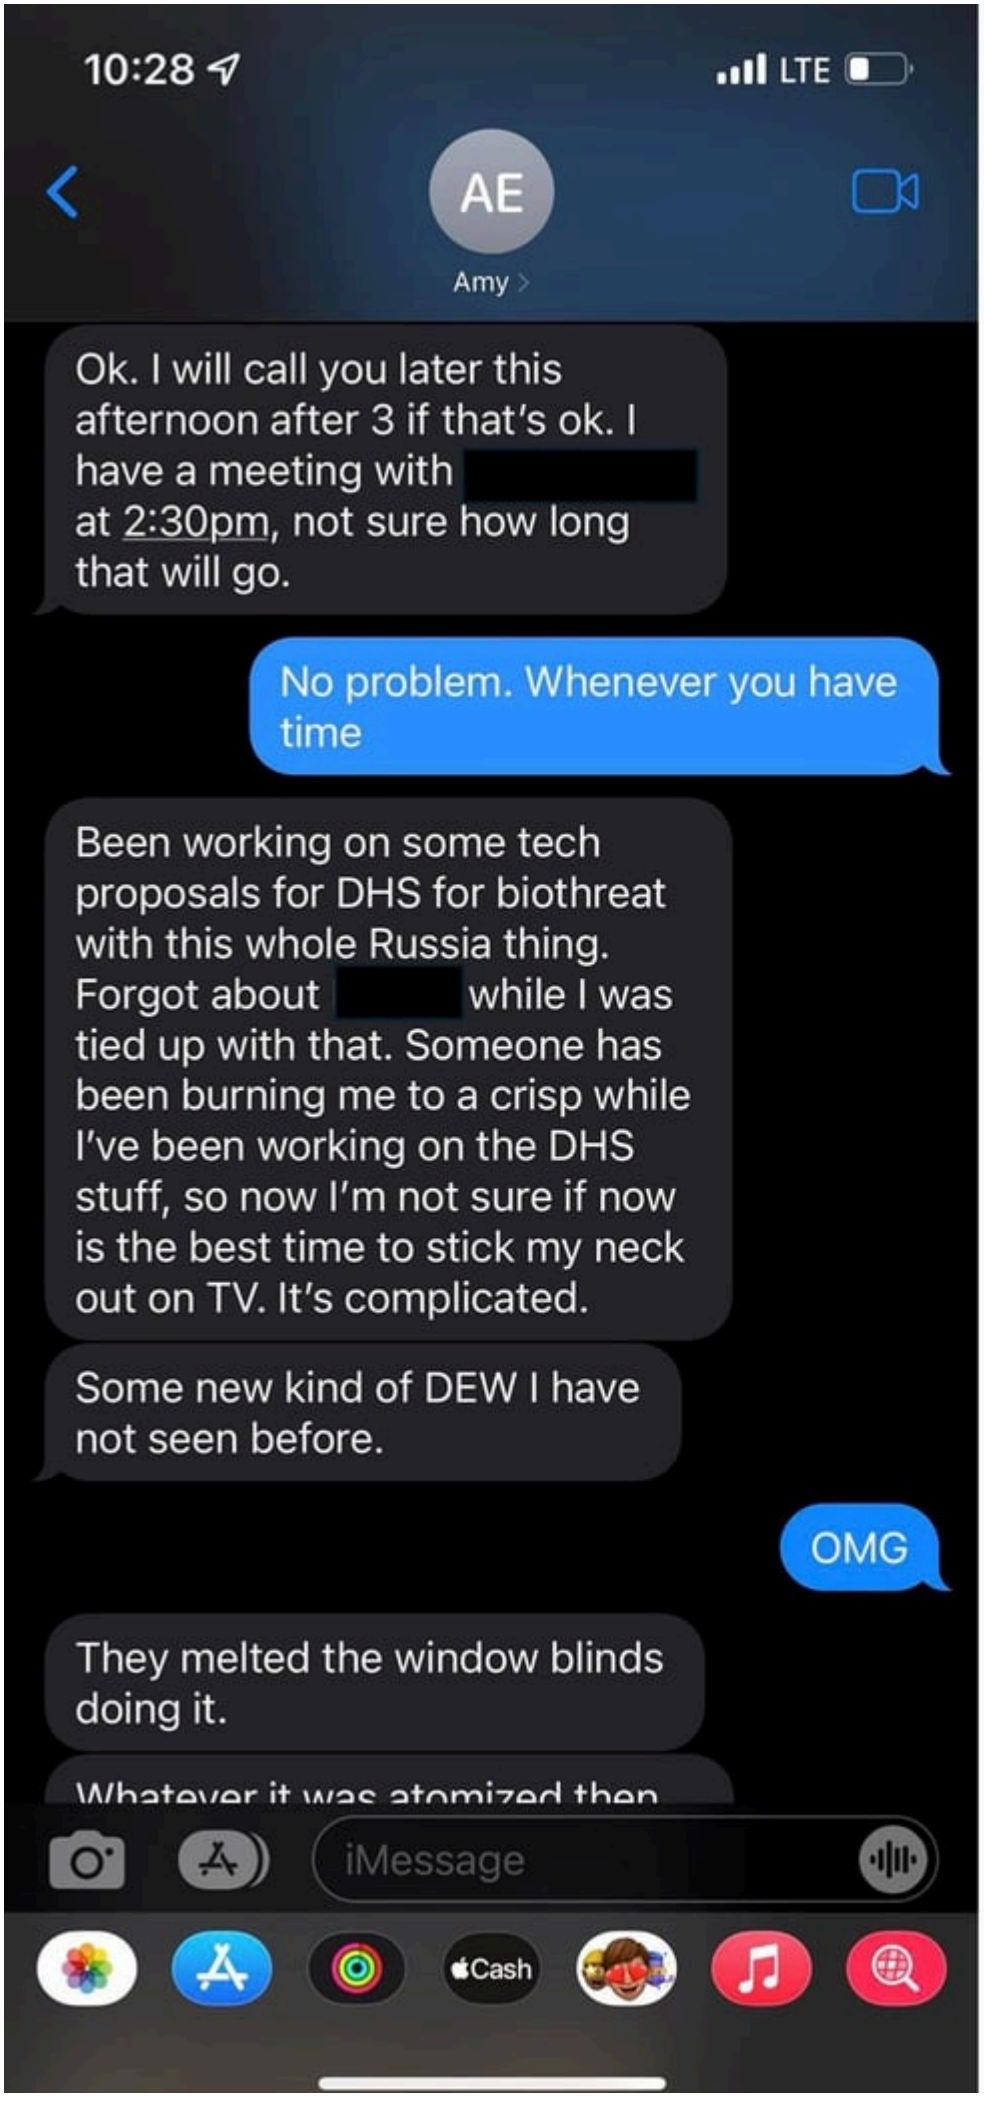
Serious- More Amy Eskridge Texts Released By Her Friend, Franc Milburn



10:28
LTE
AE
Amy
Ok. I will call you later this afternoon after 3 if that's ok. I have a meeting with [redacted] at 2:30pm, not sure how long that will go.
No problem. Whenever you have time
Been working on some tech proposals for DHS for biothreat with this whole Russia thing. Forgot about [redacted] while I was tied up with that. Someone has been burning me to a crisp while I've been working on the DHS stuff, so now I'm not sure if now is the best time to stick my neck out on TV. It's complicated.
Some new kind of DEW I have not seen before.
OMG
They melted the window blinds doing it.
Whatever it was atomized then

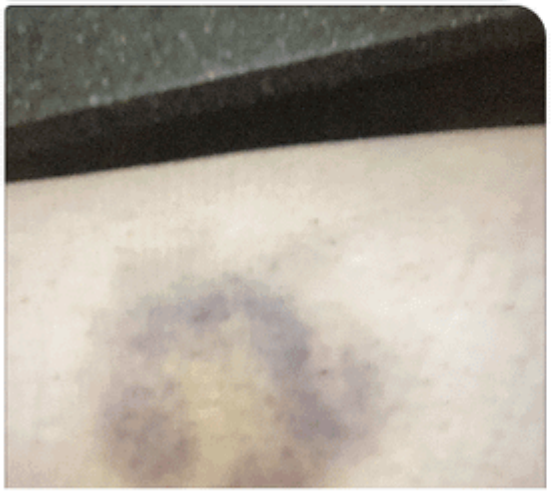
Cash

side by side at our apartment. We came back and BOTH cars had been totally drained of all the anti-freeze, huge puddle under both of them:

My camera roll is like a really disturbing and sad espionage catalogue.

Again with the randomly exploding veins:



Mensaje

horrific photos 18:46

Slow murder isn't very pretty

The swollen spine says it all. Over heating your nervous system causes an up regulation of cerebrospinal fluid production in an attempt to cool it. Then your spine swells up horrifically and you start having crazy CSF leaks. 18:49

CSF= spinal fluid? 18:50

Yes

Oh, here's one time I came home and both of the safes in my office had been opened and left open while we were gone. They opened a small safe with a keypad, where the key to the larger safe was locked away. Used the key to open the big safe, left the key in the safe and both safe doors open. Just to fuckin let me know that someone had been there.

Mensaje

Most likely. She's the friend of mine that they have fucked with a whole bunch. History of home entries there. Opened multiple gas valves in her house once, flooded her basement another time. She and her husband got really sick from a fast food bag with my name written on the outside of it once.

So there is history there of shit fuckery.

Yeah, she got medically discharged after 13 years in due to DEW attack symptoms actually.

Whatever. I'm rambling too much here . The point is... the death toll is piling up for random space related technology VIPs, specifically for NASA Marshall. My dad's old coworker was whacked the same night I got nerve agent dosed AGAIN. Great. Just got word of that a couple hours ago.

It doesn't matter though if it's a staged car accident or if it's a suffocating asphyxiating poisoning... I expect that many random different causes of death for MSFC employees will stack up soon.... including but not limited to causes of death that can be plausibly blamed on COVID. 5:53

I sayin... y'all people talking on the podcasts will be totally fucking fine. They aren't taking out the public facing personalities, they're taking out the current and potential sources.

They will very carefully leave the well known names alone. Y'all will be fine.

Two or three levels down, the sources are being taken out. 5:56

I dunno. It's not any single person's fault. I'm just mentioning what is observable. My dad's former collaborated died the same night that I should have succumbed to a lethal dose. It only didn't get me because I wasn't born yesterday and have seen this shit before.

Advanced propulsion has always been, and will continue to be for the foreseeable future, the absolute #1 foreign espionage target.

Advanced propulsion is who you deliver payloads.

You have a super fucking massive ordinance you'd like to deliver to adversarial soil? Advanced propulsion is how you accomplish that. Advanced propulsion has been for a long time and will continue for the foreseeable future to be the hottest fucking target ever for cloak and dagger shenanigans. You Google up "NASA MSFC" and "obituary" right now, and that's all you have to do to see it clearly. 6:07

Tú
So Russians / Chinese taking them out to sabotage program because they can't get at program itself, so next best option is to make sure Yank program is set back

They are all up in our programs. Their game is to exfoliate American missile offense / defense intellectual property and have their own fucking scientists improve upon it. That's the first part of the game. The second part of the game is to conduct test exercises of our own stolen IP that they have already improved, and allow us to surveil their tests and make us fucking shake in our boots as we watch them do it. 6:11

Do you want

+1 2
They are all up in our programs. Their game is to exfoliate American missile offense / defense intellectual property and have their own fucking scientists improve upon it. That's the first part of ...

Exfiltrate*, not "exfoliate".... my autocorrect is effing terrible right now. They exfiltrate the our shit, improve it, and then do easily surveillable test runs of their improved tech right in front of our faces to fucking psych us out. That's part of what's going on right now. 6:13

So yeah, they steal the tech, improve it, test it right in front of our faces in an easily surveillable way, then fucking plausibly deniable whack our scientists who invent the tech they stole in the first place. Jeeeeeesuuuuuus. It's bad.

Tú
Do you want me to look intl this vith a view to writing about it?

I don't know. I'm on the hit list either way, clearly. 6:17

I c

If you eant me to e

It's just this super fucking deadly song and dance routine that goes on and on and on forever. Even to include civilians with unclass new physics information. You don't even have to officially be in a black program to make the hit list, you just have to be within one or two or three degrees of separation from the black program to make the hit list. 6:20

You want to send me a list of names + areas

Especially since the black programs source a whole lot of their best ideas from outside of the official program, you can be a civilian minding your own fucking business, but knowing a lot of shit about physics, and end up on spending the rest of your godforsaken life dodging the bullet. It's wild.

> **Tú**
> You want to send me a list of names + areas of expertise + research? Of deceased?

SOMEONE needs to expose the fact that smart civilians are at mortal risk right now. SOMEONE needs to point out that the best and most effective espionage is routinely conducted against soft civilians targets who have no official counter intel support. 6:24

So you want me to pursue this? With a vie

I never knew her. I mostly interacted with the guys in the PRL.

Propulsion Research Lab. 15:43

I need to figure out that NASA doctor's name. There was a doctor that did all the yearly physicals for the propulsion people. I don't know why they even had a doc on staff for that. He started digging into why they all got sick at the same time in the 90's. He was pretty much the only one who was interested in running extra blood tests and stuff like that.

He didn't live very long after poking into that.

"Self inflicted" gun shot in his home while he was looking into the whole thing. 15:45

My guess would be that whoever poisoned the ice machine was the side that shot him.

Our side had already classified it and could have maybe just had a conversation with him about it. 15:46

Looks like it

Implies a man in the middle with servers somewhere in China. But you know how it is, sometimes Russia will hack you and make it look like China or vise versa. Impossible to say for sure who did it just based on the IP address locations alone. 15:52

But this is really a major problem. Our whole team has 100% of their devices compromised. Laptops and phones, everything. Every time you fix it they just get back on there. It's actually sort of an impossible feat to keep them out if you ever connect to the internet. 15:53

This is a big problem for stuff I'm doing right now. 15:54

It's deadly as hell to work in these fields. So many ways to kill you that look like natural causes or accidents. But 4 technicians dying before retirement age in the same propulsion lab, even over a span of ten years or so, is just an absurd rate of death over the average rate for natural causes. 15:55

I don't know how their families would feel about having their names printed. Man, there are so many examples though in town. 15:56

This is the same basic situation as the DEW attacks. If 100 US gov employees have been admitted to being DEW attacked, then you can be certain that a 1,000 gov employees and more than that number of civilians have actually been hit. Same with Pegasus. If they are admitting to "9 state department employees" being compromised by Pegasus, then it's actually hundreds of gov employees and a couple thousand of civilians.

The ex-Israeli intel guys really suck

The retired ones who work for these private companies.

Tú
https://bit.ly/3AcyUMH

Well, you just went on record with the most accurate and thorough discussion of DEWs ever spoken out loud in a public medium. 17:05

Because you covered cases outside of the NDA bound CIA and embassy victims, who have surely all had their comments reviewed and cleared as an approved narrative. 17:07

This is getting worse again recently actually. [redacted] and I have managed to get ourselves slapped down pretty hard simply by working on proposals together. We've both dramatically nose dived in the past few weeks. 17:28

DEWs being covert, portable and remotely deplorable makes them awesome tools for dynamic forms of punishment.

Like training a rat in a cage to avoid certain behaviors. 17:29

White patch on the window, perfectly lined up with my head.

When I work over here, I set up my offline desktop at xxxxx coffee table, and sit on the floor and type on it in this position right here.

Noticed it with the blinds down, pulled them up to get a better look at it. It's a perfect outline of my head on the window pane.

Energy beamed through the window, aimed at my damn head. Probably from a drone. Heated up the blinds enough to atomize the white paint, paint condensed on the inside of the window pane in a perfect outline of my head.

This blew our minds to discover. It was so bizarre we just laughed our asses off.

Circled in red, that intense white dot is the fucking nicotine mint I had in my mouth when they hit me.

Tucked in the top back of my cheek. You can see the top row and bottom row of my teeth under the mint, then my chin.

That's my damn head on the window pane.

You can even kinda see the intensity of my posture as I'm focused on typing.

Had to have been a drone. His grill is right behind the window. You can kinda see the image is slightly in 3D from the angle of the drone hovering right over the grill and angling the beam slightly downwards at my damn head.

We even figured out when it had to have happened. He sits in his recliner on the other side of me when we work. The fact that his head isn't visible as a shadow on the pane right behind me implies that he wasn't sitting there when it happened. It probably happened Saturday night last weekend while we were preparing for that briefing, during the 45 min time frame when he left the house to go pick up some food, while I was here alone sitting at the computer.

We were like.... Ok... these assholes just left physical evidence that is sufficient to reverse engineer what frequency it had to have been using.

Because if we figured out what material the blinds are made out of, we could figure out the vaporization temperate of that material and how much energy it would take to atomize it to leave that image on the window. The distribution of the droplets of paint should be enough to figure out the wavelength.

A drone with some kind of RF - energy device / weapon?

Yes

Aimed at the center of my skull. Perfect.

While I was here alone to avoid hitting him.

This might be the best physical evidence anyone has ever gotten.

I mean... it's right there, for all eternity, imprinted on the glass

I was laughing really hard, joking about how a piece of me has been forever quantumly entangled to the window pane. I don't want to live in the window pane forever, please do not trap a piece of my soul there. Lol, I mean Jesus.

xxxx laughed so hard when we found it he almost threw up. It was so bizarre that it was just comical

I sent it to xxxx. He was like... do you think it could be ET? I was like... no man, an ET would just remote view into my head or something. Only a human needs a device that would heat up the blinds enough to leave that marking.

Tú

ill effects)

I don't know. There was one night here that I had a pretty bad headache and felt pretty shitty. Body felt really heavy and tired. But it's hard to correlate to specific events because I feel so incredibly shitty for so much of my time.

Individual vertebra are visible. You can see the nicotine mint in my mouth. No routine everyday technology that people have in their homes is capable of doing that. Could literally only be a DEW.

While we were working on that biodefense briefing.

xxxx sent me that xxxx announcement the night of the 3rd, the same day it was posted. I immediately sent the link to xxxx that night, and he was like "oh, I wrote a proposal to xxxx 10 years ago literally proposing that they should set up a viral propitiation test bed in the New York City Subway. I have the proposal already written, I submitted it and they rejected it."

The next day, the locks on his truck no longer work. His garage door opener was broken. And his work computer was crashed when he got to the office.

Immediate overnight entry of his truck, his garage and his office the same night.

They crashed the work computer that he had written the original proposal on years ago. He luckily was able to find the document saved somewhere else.

viral propagation* test bed

Such an immediate overnight physical entry response strongly implies that one or both of our Signal apps are compromised by the adversary. They immediately entered and crashed his work computer to try to delete his old proposal.

Attempt to slow down the new proposal submission effort. Then this DEW attack thing happened a couple days later while I was here to prepare for that meeting.

And there is insider threat at all the agencies that prevents addressing it effectively. You basically have to find a third party who is outside of the insider threat matrix who understands the topic better than anyone else to solve this problem.

I understand why though. XXXX sent an email after the briefing saying that we had the deepest understanding of the broadest scope of topics of anyone they had talked to. He said his bosses referred to us as "the missing piece" and compared us to the "lost Ark" of understanding.

That's why they care so much. Because just look at how ineffective the covid response has been. Because the virologists and doctors have no fucking clue at all what they are doing. Just add biodefense to the absurdly long list of reasons that people fucking relentlessly follow me around.

Weirdly, if you look at xxxx and I and our biotech careers here in Huntsville, before I left biotech for physics... we were basically trained precisely for this current bio threat problem. Everything both of us have ever done in biotech over the past 15 years was all directly relevant to this problem.

We found that image of my head on the window pane. And I was laughing my damn ass off like "dude, I'm not allowed to see MRIs or x-rays of my own head. All of my neurological medical imaging has been deleted from my patient login accounts and redacted for years now. This damn image of my head on your window pane is the best image of my head that I will ever be allowed to see." It's just fucking hilarious, in a twisted kind of way.

Interesting timing, we are blocking windows right now

I think this particular thing happening here is an attempt to get a 3D image stream of my fingers typing on the keyboard of this offline computer. No WiFi card or Bluetooth card installed on this machine. You can't hack it. But you can beam me through the window and get a real time 3D image of me typing.

I don't think my head was actually the target this time. My hands as they were typing was the target.

My hands are currently all burned up. I thought it was a rash at first. It started the day after we started working on this proposal. I realized last night that the rash perfectly lines up with the keyboard and the edge of the table. Was like... omg... this isn't a rash, it's a burn.

Ok, so we just blocked the line of sight of this one window. Literally just barricaded the window with piles of random shit stacked in front of it. Within minutes, we felt much better. I've been in so much pain over the past few days while I've been sitting in front of this damn window typing on my computer, that I was about to totally lose my fucking shit and freaking flip the fuck out. Like so much pain my fight or flight was going through the fucking roof, damn near a pain induced panic attack. So bad. Window is now blocked with a big tall stack of random shit, and I feel 1000x better immediately.

The primary conclusion this leads me to right now is... if someone is willing to fry the absolute fuck out of my hands with microwaves just to remotely surveill a 3D image stream of what I am typing on my internet disabled computer, then it is maybe well worth the effort for the home team to figure out how they are beaming through that window and to stop it. Because if these asshole care enough about what I am typing on my offline desktop to burn the ever living fuck out of my hands to get a microwave 3D image stream of what I am typing, then whatever I am typing right now is very likely information that the home team should really prefer to not be surveilled by adversarial microwave tech right now. Hello

You can basically gauge the perceived value of surveillable information solely via assessing the lengths to which the adversary is willing to go to obtain that information. If an adversary is willing to fry the absolute fuck out of my hands just to reconstruct a 3D video image of what I am typing on my offline computer, even willing to do it at the expense of leaving a shit ton of

physical evidence in the process of doing it... then the home team probably really needs to fucking lock down immediately whatever I am typing right now. It's really pretty simple.

The more effort the adversary puts in to obtain the information, the more the home team should care about that. If the adversary cares enough about surveilling the information that they are willing to leave obvious physical evidence behind of having done it, then someone really needs to deploy an effort to investigate the surveillance attempts and immediately stop them. The home team might not even fully realize yet why the surveilled information is so important, because they do not yet fully understand the plans and motivations of the enemy. But you can maybe reverse engineer the plans and motivations of the enemy, simply by paying close attention to who they are surveilling super hard, even at the expense of leaving physical evidence, and what those very heavily surveilled people happen to be doing and working on.

I feel like I have been screaming into the wind for years now, informing anyone and everyone of what is going on, and most of them ignore me. They either don't fucking get it at all, or they are intentionally pretending to not understand.

U.S. Department of Justice

Federal Bureau of Investigation

BOSTON, MA 02115

Request No.: 1600622-000
Subject: ESKRIDGE, AMY CATHERINE

Dear Adam Winters:

This is in response to your Freedom of Information/Privacy Acts (FOIPA) request. Based on the information you provided, we conducted a main entity record search of the Central Records System (CRS) per our standard search policy. However, we were unable to identify records subject to the FOIPA that are responsive to your request. Therefore, your request is being closed. If you have additional information pertaining to the subject of your request, please submit a new request providing the details, and we will conduct an additional search. For more information about records searches and the standard search policy, see the enclosed FBI FOIPA Addendum General Information Section.

Please see the paragraphs below for relevant information that may be specific to your request. Only checked boxes contain corresponding paragraphs relevant to your request. If no boxes are checked, the corresponding information does not apply.

☐ Please be advised that your request was reopened based on the additional information you provided. A new search was conducted, and we were unable to identify records subject to the FOIPA that are responsive to your request.

☐ Records potentially responsive to your request were destroyed. Since this material could not be reviewed, it is not known if it was responsive to your request. Record retention and disposal is carried out under supervision of the National Archives and Records Administration (NARA) according to Title 44 United States Code Section 3301, Title 36 Code of Federal Regulations (CFR) Chapter 12 Sub-chapter B Part 1228, and 36 CFR 1229.10. Please be advised that the General Records Schedule (GRS) disposition authority for FOIPA records is DAA-GRS-2016-0002-0001 (GRS 4.2, Item 020).

☐ Records potentially responsive to your request were transferred to the National Archives and Records Administration (NARA). If you wish to review these records, file a FOIPA request with NARA at the following address:

National Archives and Records Administration
Special Access and FOIA
8601 Adelphi Road, Room 5500
College Park, MD 20740-6001

☐ Potentially responsive records were identified during the search. However, we were advised that they were not in their expected locations. An additional search for the missing records also met with unsuccessful results. Since we were unable to review the records, we were unable to determine if they were responsive to your request.

☐ The identification records requested are maintained by the FBI's Criminal Justice Information Services (CJIS) Division; therefore, we have forwarded a portion of your request to CJIS for processing. To check the status of this request, please contact CJIS directly at (304) 625-5590. For additional information, see the enclosed FBI FOIPA Addendum General Information Section.

☐ Requests for expedited processing are not applicable when a final response is issued within ten calendar days.

☐ Police departments should be aware that the search conducted was limited to FBI records. Requests for criminal history records or rap sheets should be directed to Criminal Justice Information Services (CJIS). Information regarding CJIS is listed in the enclosed FBI FOIPA Addendum General Information Section.

☐ Records potentially responsive to your request were transferred to the National Personnel Records Center - Civilian Personnel Records (NPRC-CPR). In order to obtain information on a file located at the NPRC, your request must be mailed to the following address:

National Archives and Records Administration
ATTN: Archival Programs
P.O. Box 38757
St. Louis, MO 63138

☐ You also requested information regarding one or more third parties. Please be advised the FBI will neither confirm nor deny the existence of such records pursuant to FOIA exemptions (b)(6) and (b)(7)(C), 5 U.S.C. §§ 552 (b)(6) and (b)(7)(C). The mere acknowledgement of the existence of FBI records on third party individuals could reasonably be expected to constitute an unwarranted invasion of personal privacy. This is our standard response to such requests and should not be taken to mean that records do, or do not, exist.

Please refer to the enclosed FBI FOIPA Addendum for additional standard responses applicable to your request. **"Part 1"** of the Addendum includes standard responses that apply to all requests. **"Part 2"** includes additional standard responses that apply to all requests for records about yourself or any third party individuals. **"Part 3"** includes general information about FBI records that you may find useful. Also enclosed is our Explanation of Exemptions.

Additional information about the FOIPA can be found at www.fbi.gov/foia. Should you have questions regarding your request, please feel free to contact foipaquestions@fbi.gov. Please reference the FOIPA Request number listed above in all correspondence concerning your request.

If you are not satisfied with the Federal Bureau of Investigation's determination in response to this request, you may administratively appeal by writing to the Director, Office of Information Policy (OIP), United States Department of Justice, 441 G Street, NW, 6th Floor, Washington, D.C. 20530, or you may submit an appeal through OIP's FOIA STAR portal by creating an account following the instructions on OIP's website: https://www.justice.gov/oip/submit-and-track-request-or-appeal. Your appeal must be postmarked or electronically transmitted within ninety (90) days of the date of this response to your request. If you submit your appeal by mail, both the letter and the envelope should be clearly marked "Freedom of Information Act Appeal." Please cite the FOIPA Request Number assigned to your request so it may be easily identified.

You may seek dispute resolution services by emailing the FBI's FOIA Public Liaison at foipaquestions@fbi.gov. The subject heading should clearly state "Dispute Resolution Services." Please also cite the FOIPA Request Number assigned to your request so it may be easily identified. You may also contact the Office of Government Information Services (OGIS). The contact information for OGIS is as follows: Office of Government Information Services, National Archives and Records Administration, 8601 Adelphi Road-OGIS, College Park, Maryland 20740-6001, e-mail at ogis@nara.gov; telephone at 202-741-5770; toll free at 1-877-684-6448; or facsimile at 202-741-5769.

Sincerely,

M. A. Seidel
